Systemic Risk Buffer calculated taking into account the exposure as at 31 March 2026 to residents in Italy.

What are the key risks that are specific to the Issuer?
<i>Risk exposure to debt securities issued by sovereign States</i> The market tensions regarding government bonds and their volatility, as well as Italy's rating downgrading or the forecast that such downgrading may occur, might have negative effects on the assets, the economic and/or financial situation, the operational results and the perspectives of the Bank. Intesa Sanpaolo Group results are and will be exposed to sovereign debtors, in particular to the Republic of Italy and certain major European Countries. <i>Risks related to legal proceedings</i> The breakdown according to the main categories of disputes with likely risk shows the prevalence of cases related to the Group's ordinary banking and credit activities, involving claims relating to banking and investment products and services or on credit positions and clawback actions. The remaining disputes mainly consist of other civil and administrative proceedings and labour disputes or criminal proceedings or proceedings related to operational violations. <i>Risks related to the economic/financial crisis and the impact of current uncertainties of the macro-economic context</i> The future development in the macro-economic context may be considered as a risk as it may produce negative effects and trends in the economic and financial situation of the Bank and/or the Group. Any negative variations of the factors that affect the macro-economic framework, in particular during periods of economic-financial crisis, could lead the Bank and/or the Group to suffer losses, increases of financing costs, and reductions of the value of the assets held, with a potential negative impact on the liquidity of the Bank and/or the Group and its financial soundness. <i>Credit risk</i> The economic and financial activity and soundness of the Bank depend on its borrower's creditworthiness. The Bank is exposed to the traditional risks related to credit activity. Therefore, the clients' breach of the agreements entered into and of their underlying obligations, or any lack of information or incorrect information provided by them as to their respective financial and credit position, could have negative effects on the economic and/or financial situation of the Bank. <i>Market risk</i> The market risk is the risk of losses in the value of financial instruments, including the securities of sovereign States held by the Bank, due to the movements of market variables (by way of example and without limitation, interest rates, prices of securities, exchange rates), which could determine a deterioration of the financial soundness of the Bank and/or the Group. Such deterioration could be produced either by negative effects on the income statement deriving from positions held for trading purposes, or from negative changes in the FVOCI (Fair Value through Other Comprehensive Income) reserve, generated by positions classified as financial activities evaluated at fair value, with an impact on the overall profitability. <i>Liquidity risk of Intesa Sanpaolo</i> Although the Bank constantly monitors its own liquidity risk, any negative development of the market situation and the general economic context and/or creditworthiness of the Bank, may have negative effects on the activities and the economic and/or financial situation of the Bank and the Intesa Sanpaolo Group. In particular, the Issuer remains attentive to the evolution of the funding market to ensure that its ordinary refinancing strategies and normal business are not affected by cumulative effect of the maturity of all the wholesale funding and the additional outflows due to the impact of adverse market liquidity scenarios. The liquidity risk is the risk that the Bank is not able to satisfy its payment obligations at maturity, both due to the inability to raise funds on the market (funding liquidity risk) and of the difficulty to disinvest its own assets (market liquidity risk). <i>Operational risk</i> The Bank is exposed to several categories of operational risk which are intrinsic to its business, among which are those mentioned herein, by way of example and without limitation: frauds by external persons, frauds or losses arising from the unfaithfulness of the employees and/or breach of control procedures, operational errors, defects or malfunctions of computer or telecommunication systems, computer virus attacks, default of suppliers with respect to their contractual obligations, terrorist attacks and natural disasters. The occurrence of one or more of said risks may have significant negative effects on the business, the operational results and the economic and financial situation of the Bank. <i>Risk related to the development of the banking sector regulation and the changes in the regulation on the solution of banking crises</i> The Bank is subject to a complex and strict regulation, as well as to the supervisory activity performed by the relevant institutions (in particular, the ECB, the Bank of Italy and CONSOB). Both the aforementioned regulation and supervisory activity are subject, respectively, to continuous updates and practice developments. Furthermore, as a listed Bank, the Bank is required to comply with further provisions issued by CONSOB. The Bank, besides the supranational and national rules and the primary or regulatory rules of the financial and banking sector, is also subject to specific rules on anti-money laundering, usury and consumer protection. Although the Bank undertakes to comply with the set of rules and regulations, any changes of the rules and/or changes of the interpretation and/or implementation of the same by the competent authorities could give rise to new burdens and obligations for the Bank, with possible negative impacts on the operational results and the economic and financial situation of the Bank.

The Barrier Event will occur if on the Valuation Date, the Final Reference Value is lower than the Barrier Level of the Worst Of Underlying. The Barrier Level is equal to 70% of the Initial Reference Value of the relevant Underlying (the “**Barrier Level**”).

If a Barrier Event has occurred, the Cash Settlement Amount will be linked to the performance of the Worst Of Underlying (i.e. the investment in the Certificate is a direct investment in the Worst Of Underlying) and therefore will be exposed to the partial or total loss of the capital invested.

In relation to the Digital Amounts, the Memory Effect, the Early Redemption Amounts and the Cash Settlement Amount, the following option applies:

Seniority of the Securities

The Certificates constitute direct, unsubordinated, unconditional and unsecured obligations of the Issuer and, unless provided otherwise by law, rank *pari passu* among themselves and (save for certain obligations required to be preferred by law) rank equally with all other unsecured obligations (other than subordinated obligations, if any) of the Issuer from time to time outstanding.

Restrictions on the free transferability

The Securities will be freely transferable, subject to the offering and selling restrictions in the United States, the European Economic Area under the Prospectus Regulation and the laws of any jurisdiction in which the relevant Securities are offered or sold.

Where will the Securities be traded?

Application will be made for the Securities to be admitted to trading on the Italian multilateral trading facility SeDeX, organised and managed by Borsa Italiana S.p.A., which is not a regulated market for the purposes of Directive 2014/65/EU as amended, with effect from the Issue Date or a date around the Issue Date.

After the Issue Date, application may be made to list the Securities on other stock exchanges or regulated markets or to admit to trading on other trading venues as the Issuer may decide.

What are the key risks that are specific to the Securities?

The Certificates may not be a suitable investment for all investors

Certificates are complex financial instruments. A potential investor should not invest in Certificates which are complex financial instruments unless it has the expertise (either alone or with the help of a financial adviser) to evaluate how the Certificates will perform under changing conditions, the resulting effects on the value of the Certificates and the impact this investment will have on the potential investor's overall investment portfolio.

General risks and risks relating to the Underlyings

The Securities involve a high degree of risk, which may include, among others, interest rate, foreign exchange, time value and political risks. Purchasers should be prepared to sustain a partial or total loss of the purchase price of their Securities. Fluctuations in the value of the relevant Underlying will affect the value of the Securities. Purchasers of Securities risk losing their entire investment or part of it if the value of the relevant underlying basis of reference does not move in the anticipated direction.

Certain considerations associated with Share Securities

In the case of Securities relating to a share or to a GDR/ADR (or basket of shares or basket of GDRs/ADRs), no issuer of such shares will have participated in the preparation of the relevant Final Terms or in establishing the terms of the Securities and neither the Issuer nor any Manager will make any investigation or enquiry in connection with such offering with respect to any information concerning any such issuer of shares contained in such Final Terms or in the documents from which such information was extracted. Consequently, there can be no assurance that all events occurring prior to the relevant issue date that would affect the trading price of the shares will have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning such an issuer of shares could affect the trading price of the shares and therefore the trading price of the Securities. Securityholders will not have voting rights or rights to receive dividends or distributions or any other rights with respect to the relevant shares to which such Securities relate.

Loss risk in relation to the investment

The Securityholders shall consider that, in relation to its investment, there is a risk of loss of the capital invested depending on the features of the Securities and on the performance of the Underlying. In particular, in the event a Barrier Event has occurred, a loss will occur in respect of the capital invested. If the Final Reference Value is equal to zero, the investor will suffer a total loss of the capital. Moreover, if prior to the exercise the investor decides to terminate the investment in the Certificates, the investor might be subject to the loss of the value of the Certificate and, therefore, might be subject to the total or partial loss of the investment. An early termination of the Securities following the occurrence of a Market Disruption Event or an Adjustment Event under Condition 15 (Market Disruption Events and Adjustment Events) will entitle Securityholders to receive an amount not lower than the fair market value of the Securities. If such amount is lower than the purchase price paid by the Securityholder, the Securityholder will incur a partial loss of the initial investment.

Risk related to the occurrence of an Early Redemption Event

If an Early Redemption Event occurs, the Certificates will be redeemed earlier than the Settlement Date (and therefore terminated). In such case, the Securityholders will receive the Early Redemption Amount on the relevant Early Payment Date and no other amounts will be paid. The Early Redemption Amount is an amount predetermined by the Issuer which will not depend on the value of the relevant underlying asset and, therefore, the potential positive performance of such underlying asset will not be considered. In addition, in the event that the relevant underlying asset is registering a positive performance when an Early Redemption Event occurs, investors should consider that it may not be possible to reinvest in such underlying asset at the same conditions applied to the initial investment made in the Certificates.

Impact of implicit fees on the Issue Price/Offer Price

Investors should note that implicit fees (e.g. placement commissions/distribution commissions, structuring fees) may be a component of the Issue Price/Offer Price of the Securities, but such fees will not be taken into account for the purposes of determining the price of the relevant Securities in the secondary market. Investors should also take into consideration that if Securities are sold on the secondary market immediately following the offer period relating to such Securities, the implicit fees included in the Issue Price/Offer Price on initial subscription for such Securities will be deducted from the price at which such Securities may be sold in the secondary market.

Possible illiquidity of the Securities in the secondary market

It is not possible to predict the price at which Securities will trade in the secondary market or whether such market will be liquid or illiquid. The Issuer, or any of its Affiliates may, but is not obliged to, at any time purchase Securities at any price in the open market or by tender or private treaty. Any Securities so purchased may be held or resold or surrendered for cancellation. The Issuer or any of its Affiliates may, but is not obliged to, be a market-maker for an issue of Securities. Even if the Issuer or such other entity is a market-maker for an issue of Securities, the secondary market for such Securities may be limited. To the extent that an issue of Securities becomes illiquid, an investor may have to wait until the Settlement Date to realise value.
